

chosen for its quality

Reliable products, technical research, service for enterprises: in short, quality according to Technokolla. A value on which the quality of the enterprise is based, but also a daily practice for all those who, with different responsibilities and skills, work in the company.

The decision to propose only products of the very highest quality, ones able to face the challenges of an increasingly more demanding and constantly evolving market, has proved to be a winning strategy.

This goal, i.e. quality, involves on-going research and the development of new technologies that satisfy the requirements of the building industry in a tangible way. Technokolla's laboratories are a mine of projects and ideas that give rise to extremely technological products with the very highest standards.

The tests, trials and experiments never stop and have led to a true "Technokolla Technology", i.e. a whole series of systems, processes and sophisticated technologies created with a view to constantly improving the performance of the company's products.

Technokolla's goal is quality at all levels and "CE" marking in accordance with the most stringent European and international standards confirms that this is the right policy.

TECHNOLOGY**

Technokolla Technology

Dust is no longer a problem

“NO-DUST SYSTEM” reduces dust emissions by 95%.

All the products that bear the “HD” trademark considerably cut down on dust, thus safeguarding the operators’ health and making the work site a cleaner and healthier place.

The air is now fresher thanks to Technokolla research!

Bio-ecological products

Technokolla has been researching ever more innovative and ground-breaking bio-ecological products for over ten years, building “according to nature” being its goal. Use of recyclable, non-polluting materials with a low environmental impact is one of the “musts” for Technokolla, which has always been in the forefront when it comes to care and respect for the environment.

Silver ions for healthier places

“SILVER ACTIVE SYSTEM” is the only active system which, when applied to the ultra-new “POWERCOLOR” grouting compound, revolutionizes the world of cement-based sealants. Thanks to the oligodynamic action of silver ions, this product prevents mould, fungi and bacteria from proliferating while providing long-lasting, active protection even after the grouting has carbonated.

To live and work in healthy, safe and sanitized surroundings, use Silver Active technology. Certified by Centro Ceramico Bologna.

Ultra-high efficiency products

The Technokolla laboratories have created “HIGH PERFORMANCE SYSTEM”, an absolutely ground-breaking formula which, when applied to adhesives, is able to improve their performance while sensibly cutting down on consumption, thus saving on costs and speeding up the job.

Put a stop to bacteria

An efficient barrier against bacteria: that’s MICROSIELD SYSTEM, the new technology applied to cement-based grouting compounds. Thanks to the bacteriostatic action of this system, the growth of micro-organisms, fungi and mould, which often damage the joints in tiled surfaces, is no longer a problem. The action of MICROSIELD SYSTEM is ideal for places where high standards of hygiene are required. Certified by Centro Ceramico Bologna.

To keep the colours bright and unchanged

This special technology ensures that all cement-based grouting compounds are colorfast. Both bright and pastel tones will remain unchanged as the years go by. “Color Save System” prevents differences in shades and guarantees a perfect finish for floors and walls.

Against water and humidity

With “Water repellent system” it’s easy to protect walls and floors from the damp and to keep rooms healthy and well cared for over time.

Thanks to this new technology, created in the Technokolla laboratories, cement-based grouting compounds become water repellent, i.e. unable to absorb water.
